BENEFITS OF USING THERALASE

Theralase is a proven medical device that safely and effectively stimulates deep tissue regeneration and relieves pain and inflammation.

Rapid Cell Growth

Theralase Laser light accelerates cellular reproduction and growth.

Faster Wound Healing

Theralase Laser light stimulates fibroblast development and accelerates collagen synthesis in damaged tissue.

Anti-Inflammatory Action

Theralase Laser light reduces swelling caused by bruising or inflammation of joints to provide enhanced joint mobility.

Reduced Fibrous Tissue Formation

Theralase Laser light reduces the formation of scar tissue following tissue damage from: cuts, scratches, burns, or post surgery.

Increased Metabolic Activity

Theralase Laser light produces higher outputs of specific enzymes, greater oxygen and food particle loads for blood cells and thus greater production of the basic food source for cells: Adenosine triphosphate (ATP).

Increased Vascular Activity

Theralase Laser light induces temporary vasodilation increasing blood flow to damaged areas.

Stimulated Nerve Function

Theralase Laser light speeds up the process of nerve cell reconnection to bring the numb areas or "dead limbs" caused by slow recovery of nerve function in damaged tissue back to life.

WHAT OUR CUSTOMERS ARE SAYING

Roy Halladay #32, Former - Pitcher Toronto Blue Jays

"I use the Theralase laser to keep my throwing arm healthy. It reduces fatigue and allows me to play at my peak, game after game."

Perdita Felicien, World Champion, Track & Field

"As a professional athlete I have tried many treatments over the years to help me recover from injury. In my first week using Theralase I noticed immediate relief to my injured left foot, the result was unlike any laser I had used in past. In my line of work injuries happen and Theralase is designed to speed up my body's own healing to get me off the sidelines and back to the track quickly"

James Blake, Ranked #14 professional tennis player in the world in 2007

"I had to withdraw from the Rogers Masters in Montreal due to a severe abdominal muscle strain. For the next two weeks, I had two laser treatments per day with Theralase 1000 cluster laser, which accelerated the tissue healing and reduced the pain. In the next two tournaments I was runner-up at the Western & Southern Financial Group Masters at Cincinnati and I then clinched the Pilot Pen Tennis at New Haven. Theralase laser treatments were very helpful in accelerating my recovery time."
